

## 58. Lasers- applications in prosthetic dentistry

Vidya Bhat S

Yenepoya Dental College

Laser is an acronym, for light amplification by stimulated emission of radiation. Laser treatment is a sole source of remedy in some medical fields, but in dentistry the use of a laser is considered an adjunctive procedure. Lasers in dentistry are gaining popularity due to its many advantages like faster healing and painless procedure. This paper will review the uses of lasers in prosthodontics in its all branches of removable, fixed, maxillofacial branches and implantology.
