6. Veneers & all ceramics clinical science

Aparna
Zenith Skin Hair and Dental Centre, New Delhi

All ceramics has become a clinical boon for dental practitioners. All ceramics can work magically if done correctly in a patient. The material is promising with high longevity. This includes indications for anterior as well as posterior teeth. Veneers are done substandard and they therefore fail to please both dentist and patient. Veneers pre-preparation guidelines, mock up by composite before preparation, and their final outcome so that a beautiful smile can be visualized for perfect results. Precise preparation designs, final length, width shape of all ceramic restoration changes smile for good. Careful treatment planning, advances in material and adhesive technologies makes all ceramic system suitable for a wide range of indications. This presentation focuses on multiple uses of all ceramic system and esthetic veneers. Significant functional and esthetic improvement is attained even with discolored teeth.
